HACKRU · FALL 2026

Omni-Bridge

Clinical research explained
in the participant's language

Consent guide + conversation bridge

Fictional study · Research prototype

THE PARTICIPANT'S QUESTION

Understanding the choice

“So I will definitely get the new medicine?”

A fluent explanation can still lose uncertainty, placebo assignment, or the right to leave.

ONE SHARED WORKSPACE

Two equal workflows

01

Consent guide

Choose a document section.
Explain its meaning in simpler language.

02

Conversation bridge

Speak or type an explanation.
Correct the transcript before sending.

Both prepare a draft for coordinator review and explicit release.

SYNTHETIC SOURCE MATERIAL

The CLEAR Study

CLEAR-026 · DEMO-1.0

Investigational tablet compared with placebo.

No guaranteed health benefit.

October 10, 2026

Study purpose
Group assignment
Visits and procedures
Risks and uncertainties
Voluntary participation
Leaving the study

One section at a time

01 Select the source section and participant language

02 Prepare a simpler explanation with its source attached

03 Inspect the target text, back-translation, and flags

04 Release the current draft after coordinator review

CONVERSATION BRIDGE

Speech with a review step

Speak. Review the transcript. Send. Review the explanation. Then release.

Typed input remains available. Browser recognition may use a remote speech service; synthetic demonstrations only.

FIVE TARGET LOCALES

Language choices

Türkçe	Turkish
Español	Latin America
Português	Brazil
हिन्दी	Hindi
简体中文	Mandarin

All five need qualified human review. Turkish team review is pending.

LIVE ENGINE

Gemini prepares. The coordinator reviews.

Two stateless requests

Source → target explanation

Target explanation → English

The second request does not see the original source.

Visible review evidence

Source and study version

Structured output checks

Flags and back-translation

Explicit release action

The same model can make correlated errors. This is a review aid.

REVIEW EXAMPLES FROM THE FICTIONAL STUDY

Critical facts in view

50%	Chance of either group; neither person chooses
4 visits · 8 weeks	Approximately 60 minutes per visit
5 mL	Blood sample at the first and final visits
Your choice	May leave at any time without penalty

DEMONSTRATION BOUNDARIES

What the prototype establishes

Inspect the workflow

Both modes use the same review gate. Fixed samples keep a demo reproducible and visibly separate from live Gemini.

Further review is needed

No clinical validation or measured patient outcomes. No real patient records, signatures, or durable clinical approval.

The original document and human consent discussion remain authoritative.

NEXT STEP

Review with the people who will use it

Qualified language reviewers.
Research coordinators.
Participants in a usability study.

Document missed errors and confusing concepts before expanding into teach-back checks or real study workflows.
