HACKRU FALL 2026

# SayAhh

## Understand the trial in your language

Clinical-trial explanations and coordinator conversations

Source-linked explanations and two-way conversation

Fictional education prototype

A FICTIONAL PARTICIPANT'S QUESTION

# Understanding the choice

## “So I will definitely get the new medicine?”

A fluent explanation can still lose uncertainty, placebo assignment, or the right to leave.

ONE CONNECTED SESSION

# The explanation leads to the next question

### Document guide

Original paragraphs stay attached to reviewed explanations.

### Conversation

A participant asks in their language. A human coordinator replies in English.

The source context and language travel with the question.

SOURCE MATERIAL

# Two fictional documents

### The CLEAR trial

Six sections about purpose, randomization, visits, risks, choice, and withdrawal.

The main clinical-trials demonstration

### Outpatient follow-up note

An attributed explanation of the note's fictional assessment and documented plan.

The same source-linked workflow

Synthetic paste also available in live mode, up to 4,000 characters

DOCUMENT GUIDE

# Source, draft, review, share

01 Read the original section or paragraph

02 Prepare a plain-language explanation

03 Compare the target text, English rendering, and flags

04 Share the exact current draft after review

The participant sees the shared explanation, with its source attached

TWO-WAY CONVERSATION

# The participant speaks too

## “Bu kurgusal çalışmaya katılmak zorunda mıyım?”

“Do I have to participate in this fictional study?”

Both people can type or speak. Each translation needs review and sharing.

LANGUAGE AND READING PREFERENCES

# A readable participant view

| | |
|---|---|
| English | Plain language |
| Español | Latin America |
| हिन्दी | Hindi |
| Türkçe | Turkish |
| Português | Brazil |
| 简体中文 | Mandarin |

16 live languages · Six prepared sample languages · Larger reading text

Language availability is not validated translation quality

LIVE GEMINI PROCESSING

# Two calls, one review step

### First call

Explain source paragraphs or translate a human turn into the target language.

### Fresh second call

Render only the generated target text back into the original language.

The second call never receives the original source or conversation history.

FACTS AND ATTRIBUTION

# Meaning must survive

| | |
|---|---|
| **50% chance** | Neither person chooses the trial group |
| **4 visits in 8 weeks** | Timing and quantities remain connected |
| **Without penalty** | Withdrawal rights retain their negation |
| **“The note lists…”** | A documented plan stays attributed to its source |

Flags direct attention and can miss semantic errors

DEMONSTRATION EVIDENCE

# Working paths and clear limits

## Inspect the actual run

Visible engine labels.

Actual live response or error.

Prepared samples as a labelled backup.

## Further review

Qualified language review.

Real microphone and voice testing.

Clinical-deployment assessment.

Observed latency describes a request. It does not establish a benchmark.

OPEN SOURCE AND NEXT REVIEW

# The source stays central to the conversation

Review with interpreters and research coordinators.
Document missed errors and confusing wording.

MIT source · Reproducible setup · Gemini and Codex assistance disclosed
